Parts made from 6mm Depron or BlueCore  
foam unless otherwise specified

Forward fuselage bottom  
(Make 1)

Outboard nacelle side  
(Make 2)

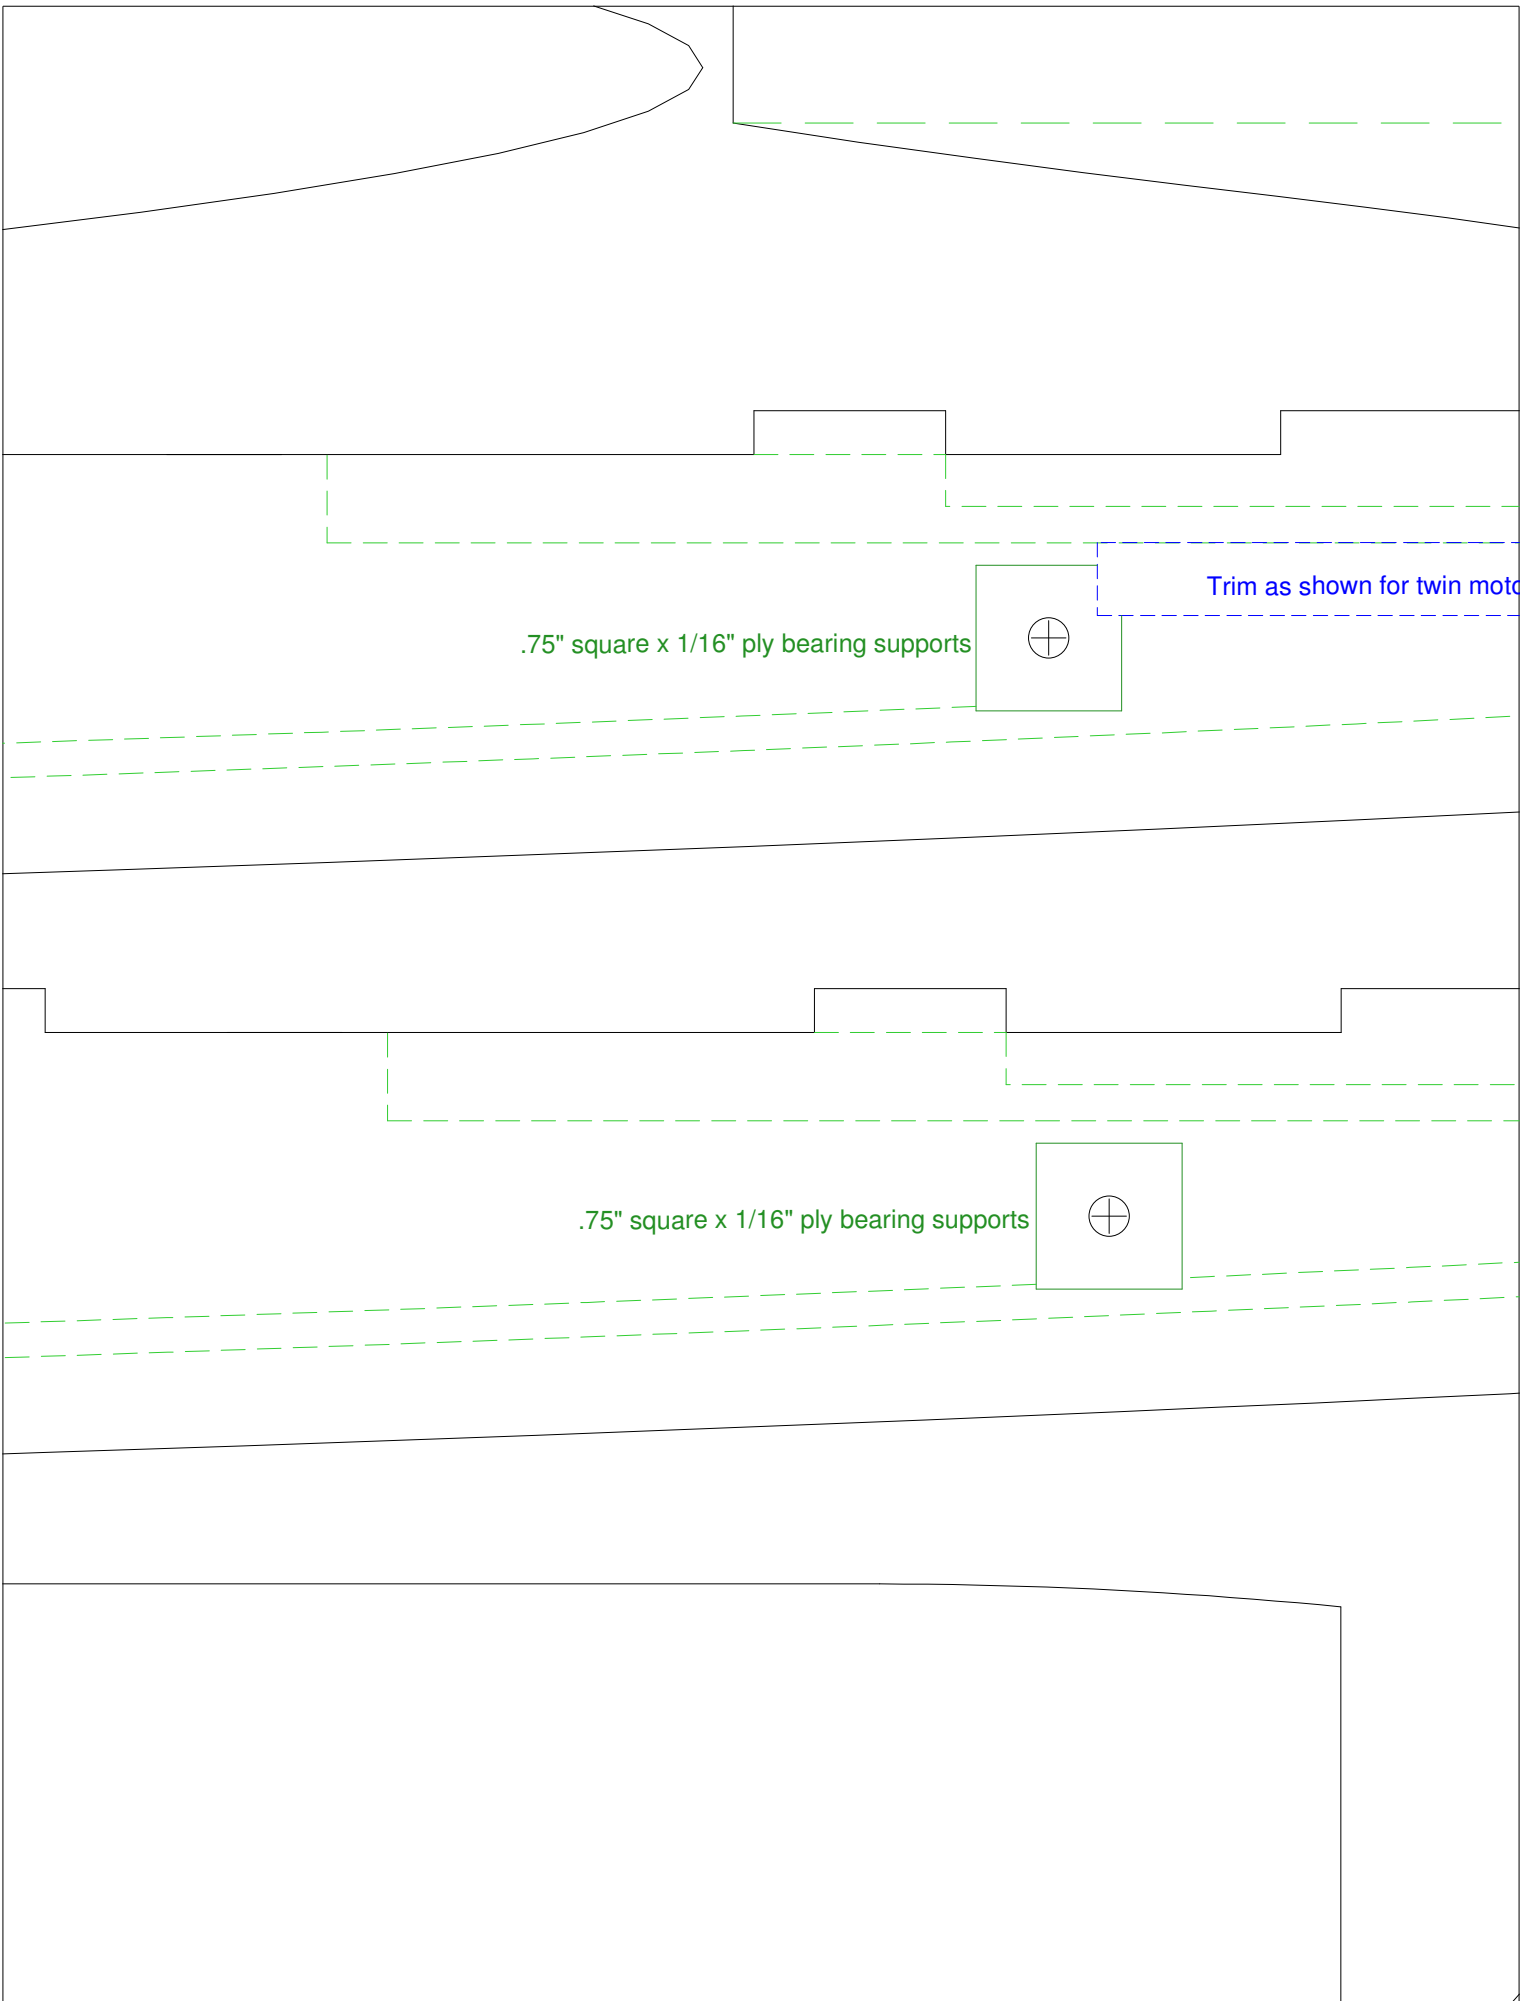

Inboard nacelle side  
(Make 2)

Nacelle bottom  
(Make 2)

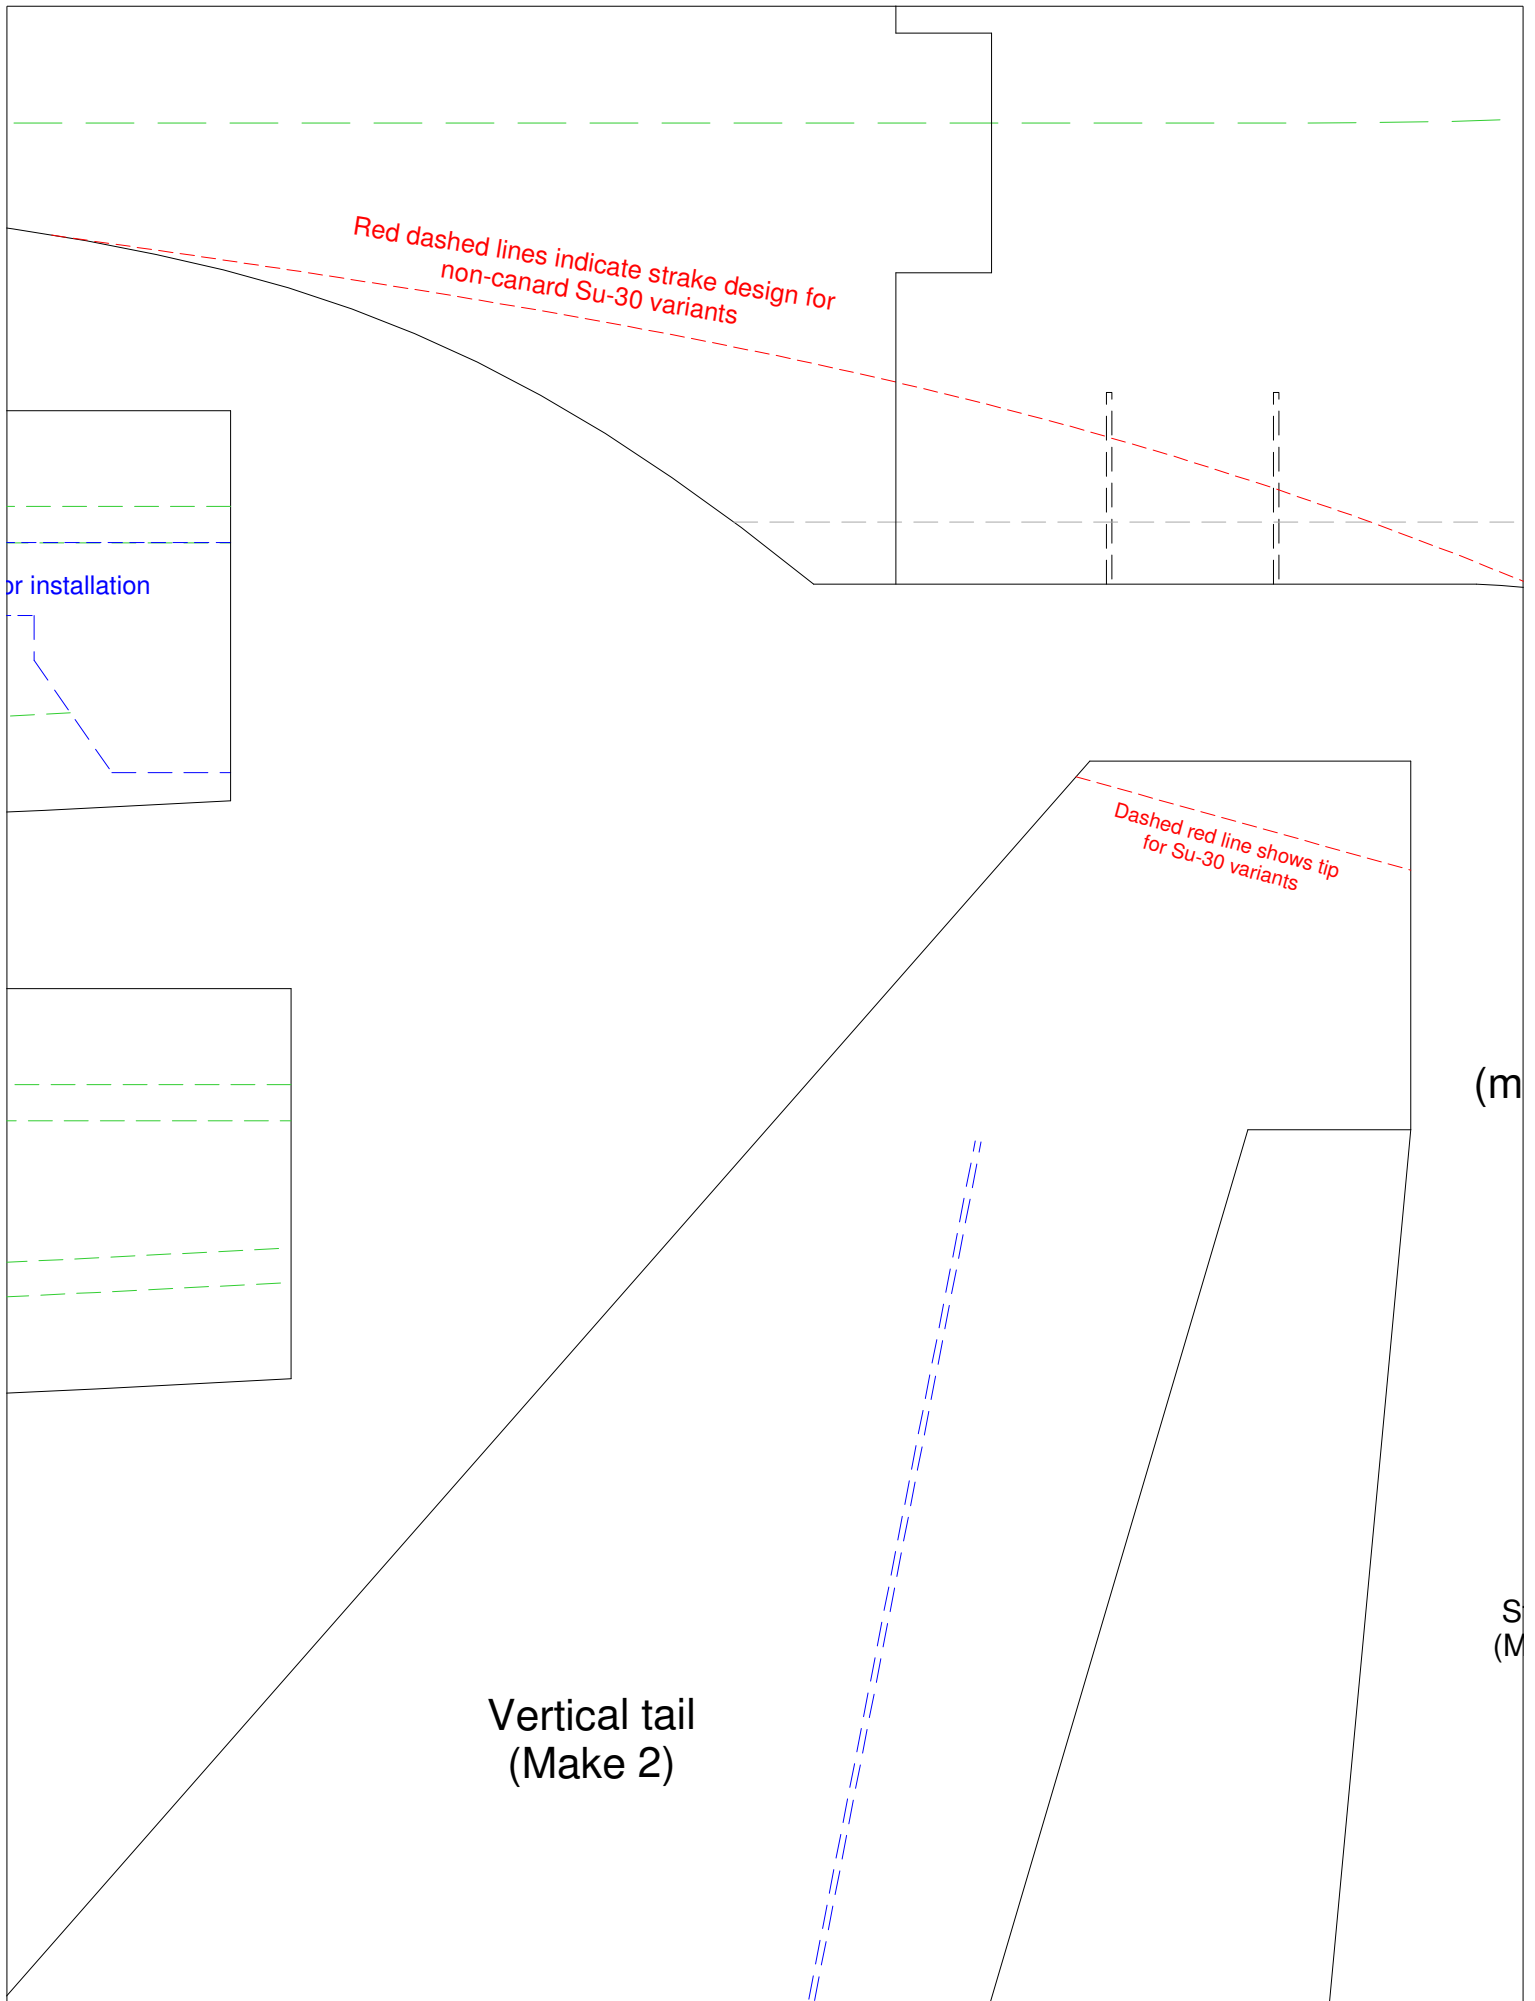

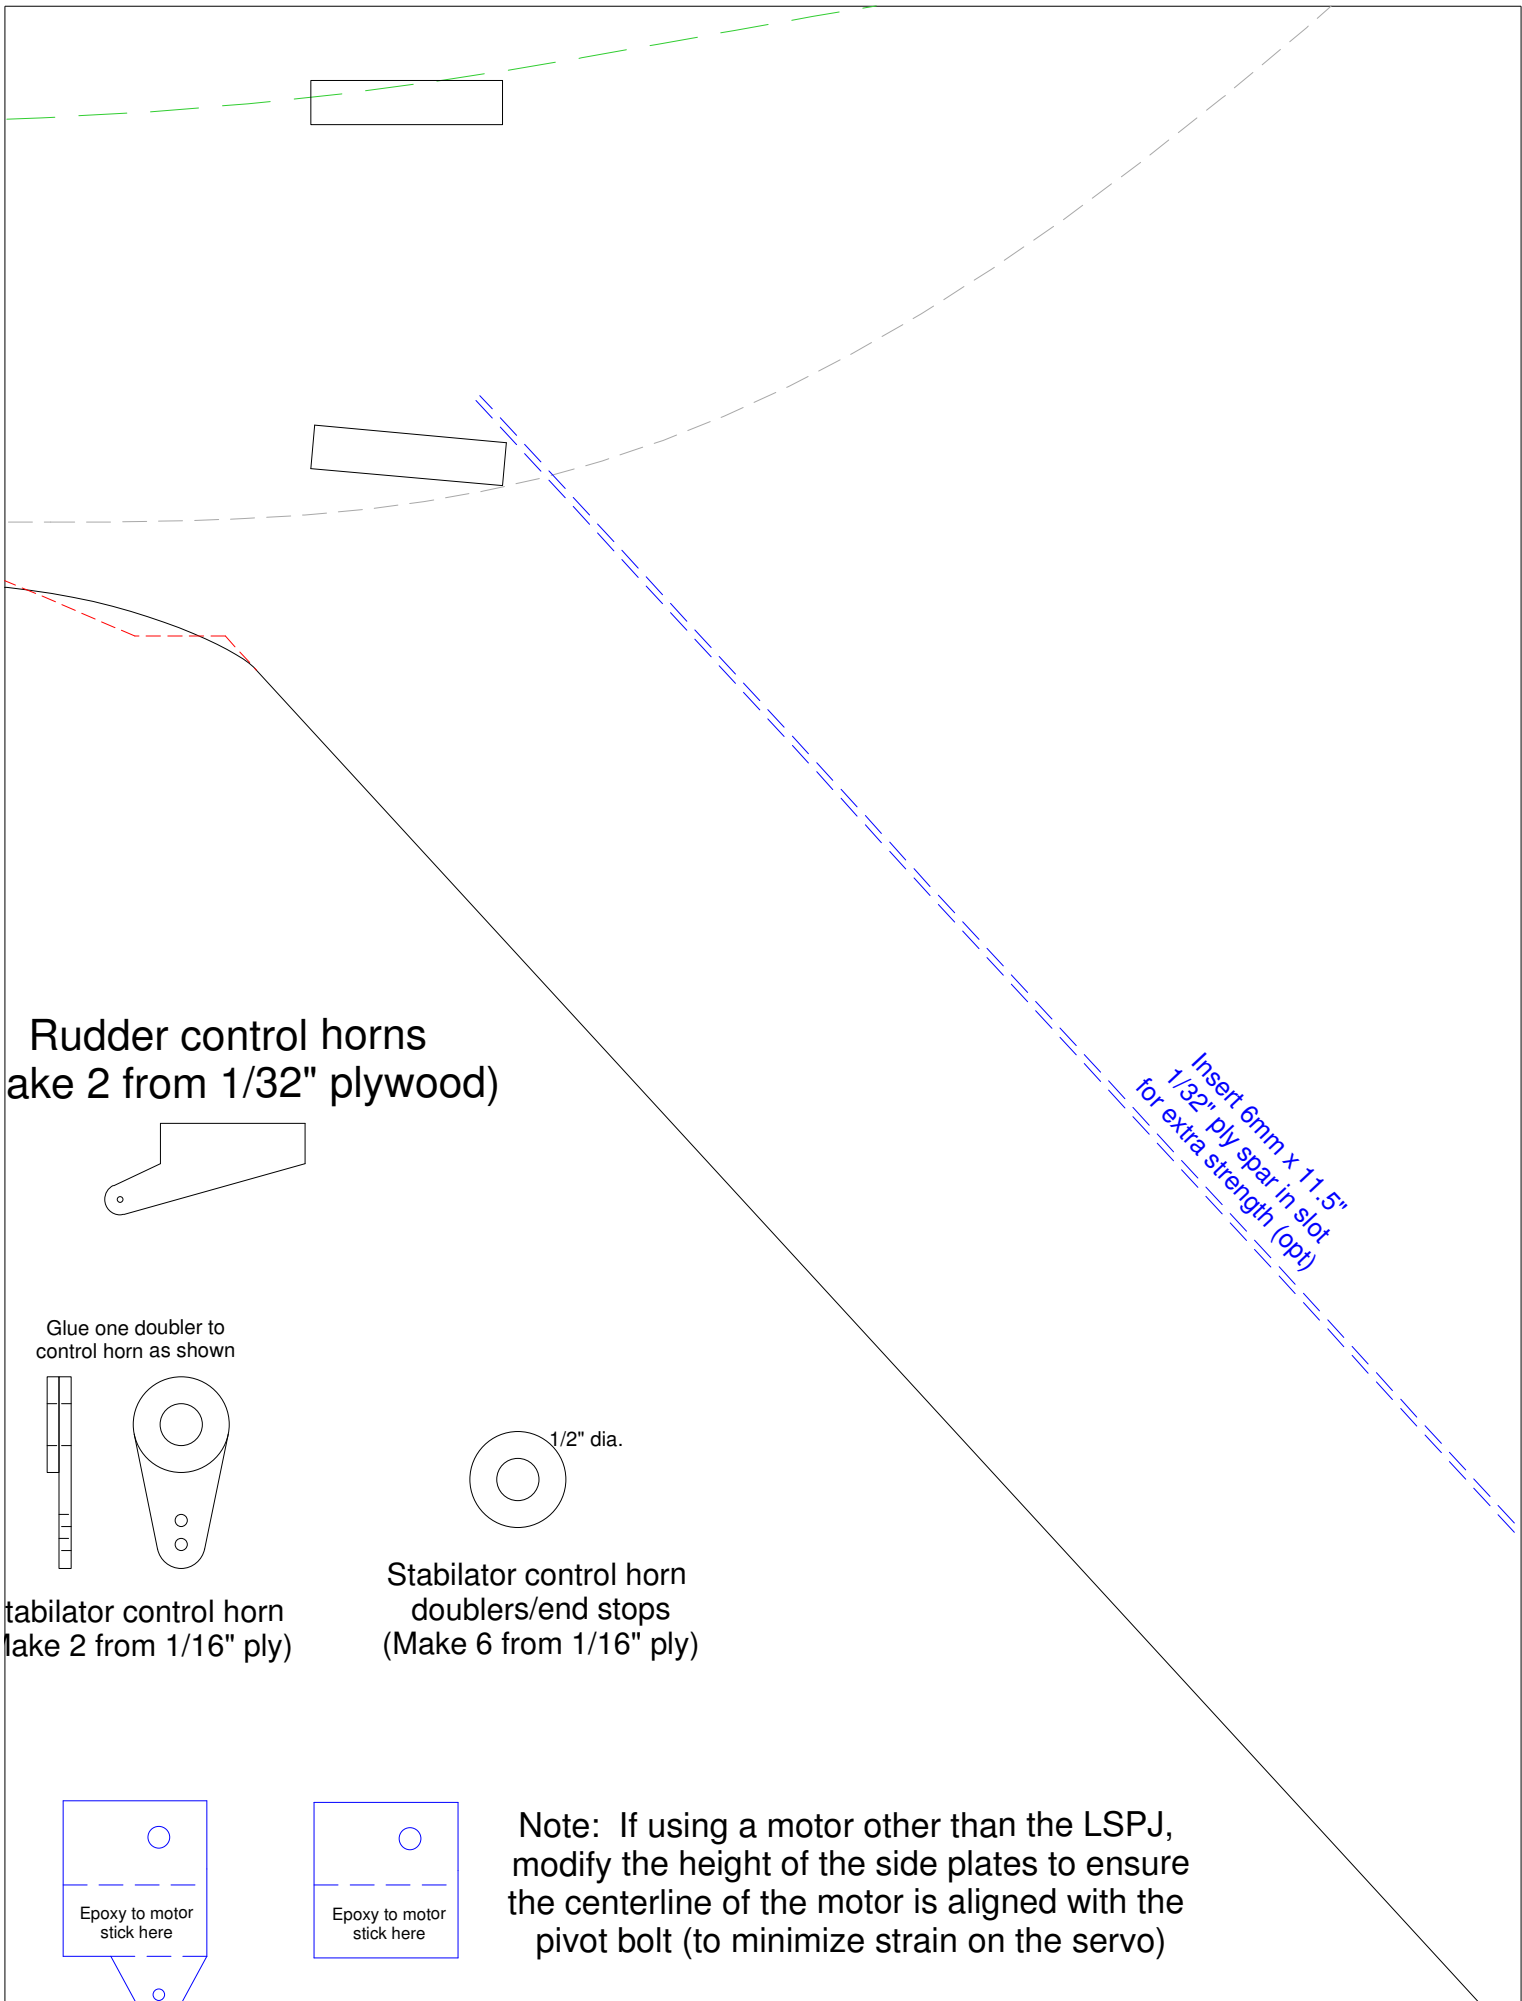

.75" square x 1/16" ply bearing supports

Trim as shown for twin motor

.75" square x 1/16" ply bearing supports

Rudder control horns  
(Make 2 from 1/32" plywood)

Glue one doubler to control horn as shown

Stabilator control horn  
(Make 2 from 1/16" ply)

Stabilator control horn  
doubler/end stops  
(Make 6 from 1/16" ply)

*Insert 6mm x 1.5"  
1/32" ply spar in slot  
for extra strength (opt)*

Note: If using a motor other than the LSPJ, modify the height of the side plates to ensure the centerline of the motor is aligned with the pivot bolt (to minimize strain on the servo)

Insert 1/32  
spar inside  
(6mm x 4)

Section

Aft fuselage spine--bottom  
(Make 1)

Trim off this part  
if using single motor

braces (6 deg dihedral)  
e 4 from 1/32" ply)

Red dashed lines indicate strake design for  
non-canard Su-30 variants

Splice wing here to fit  
on one sheet of Depron

Make the canard strong enough, either:  
1. Make the entire canard from 3/16" sheet balsa  
2. Make the canard from foam but edge with hard balsa as shown  
3. Make the canard from foam and fiberglass the top and bottom

Insert 6mm x 11.5"  
1/32" ply spar in slot  
for extra strength (opt)

Wing  
(Make 1)

.22" carbon tube spar

Cut slots to fit tabs in nacelle sides (typical)

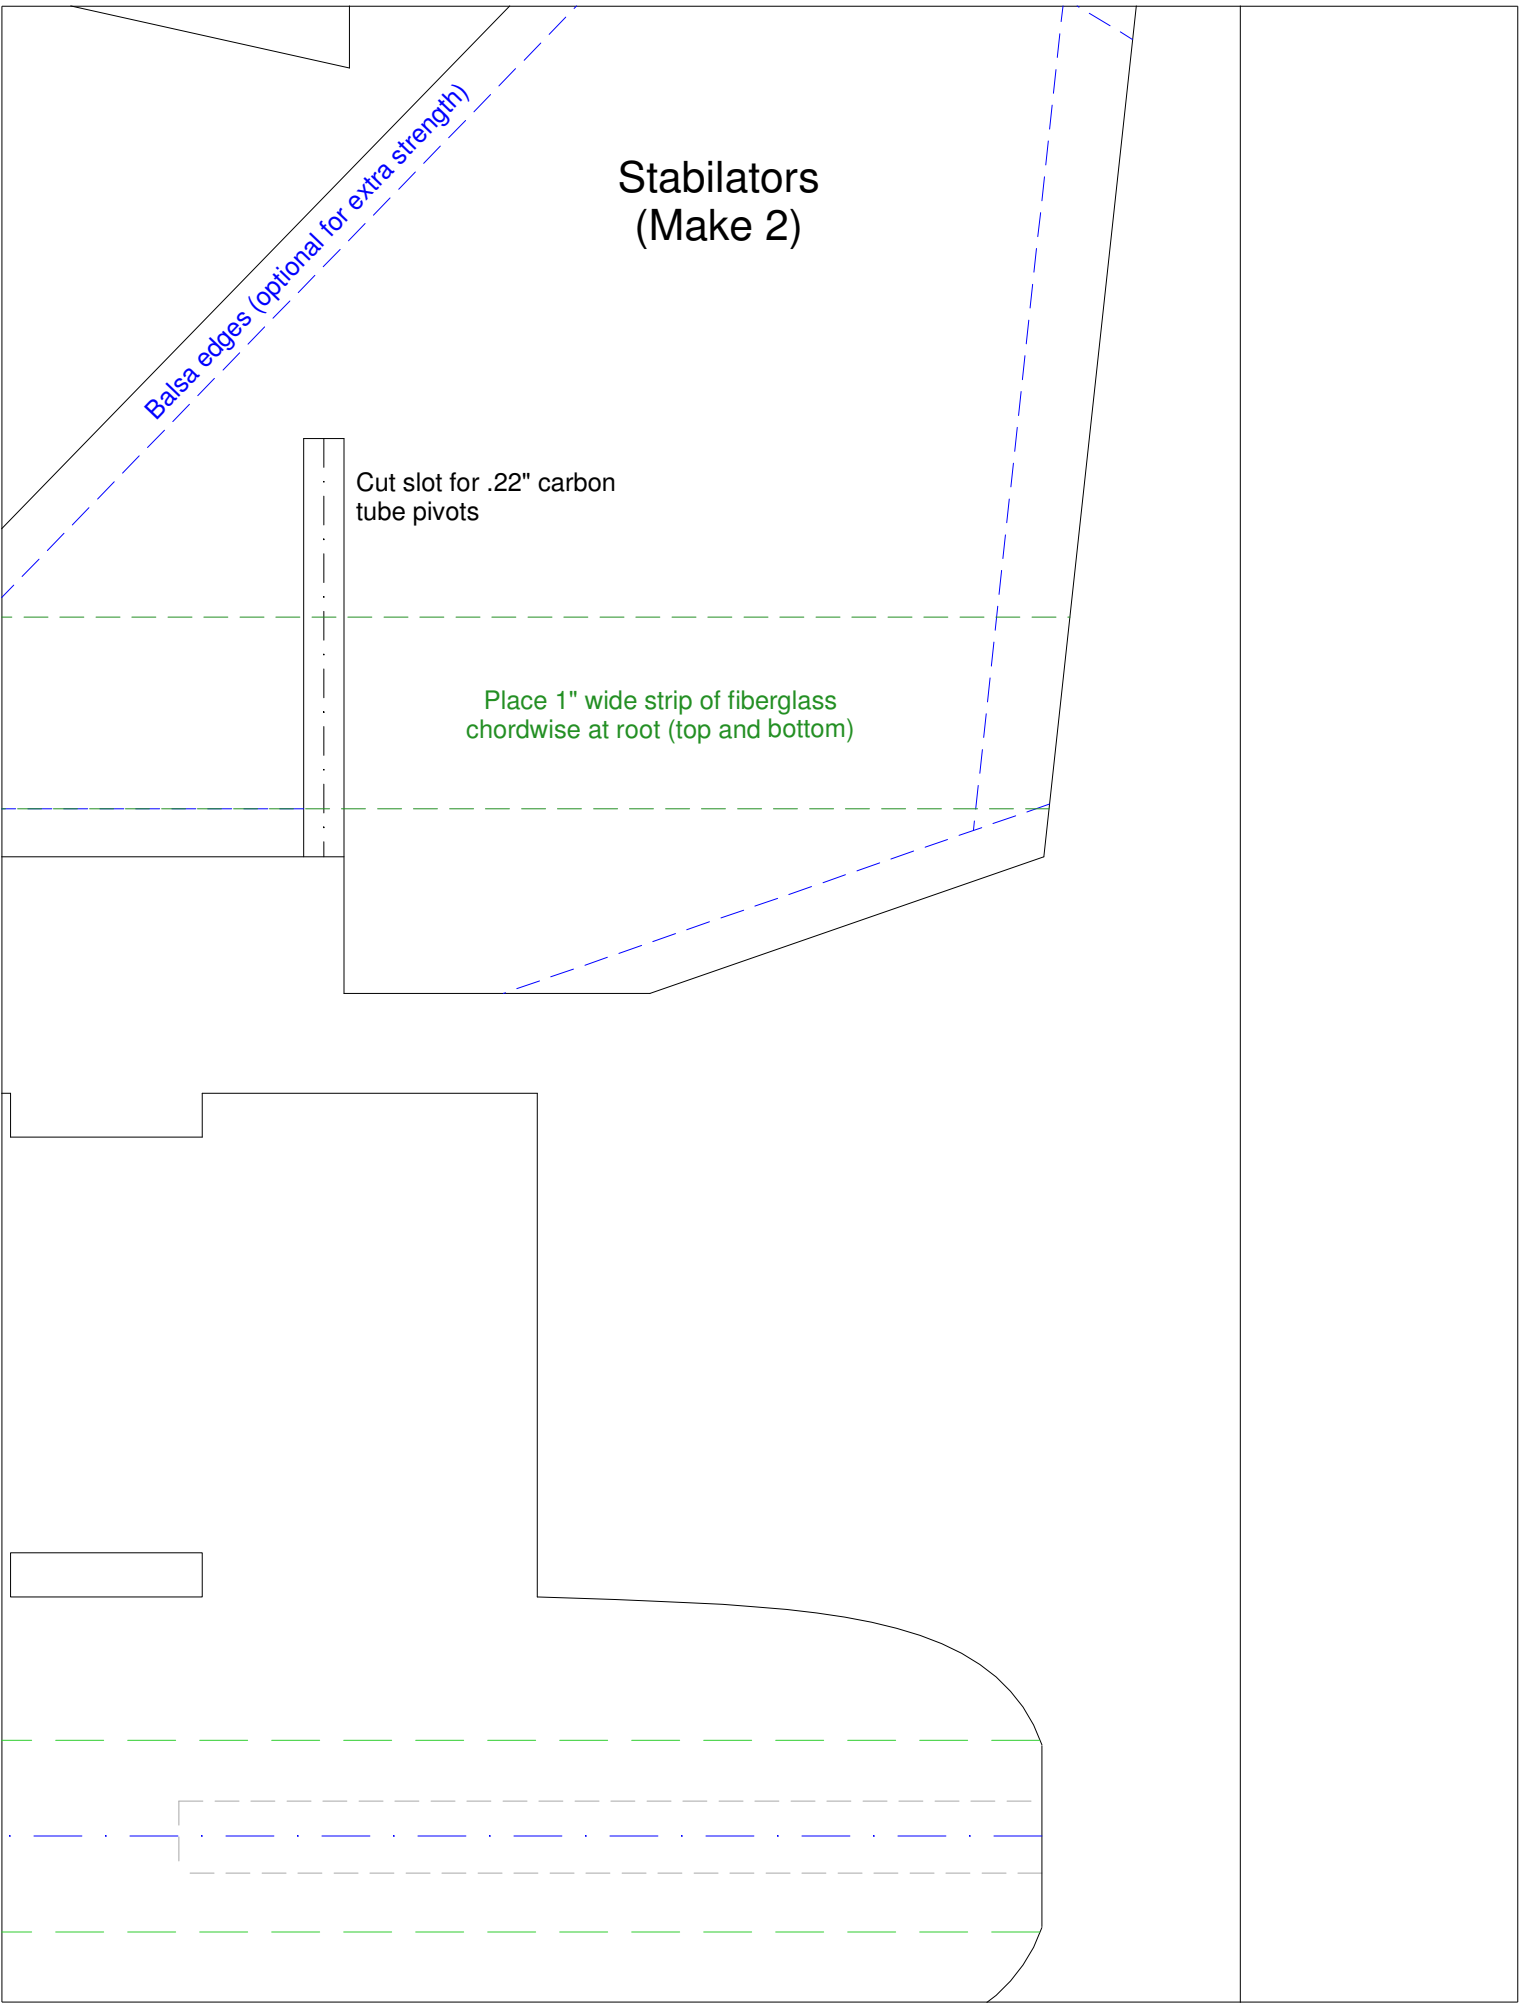

# Stabilators (Make 2)

Balsa edges (optional for extra strength)

Cut slot for .22" carbon tube pivots

Place 1" wide strip of fiberglass chordwise at root (top and bottom)

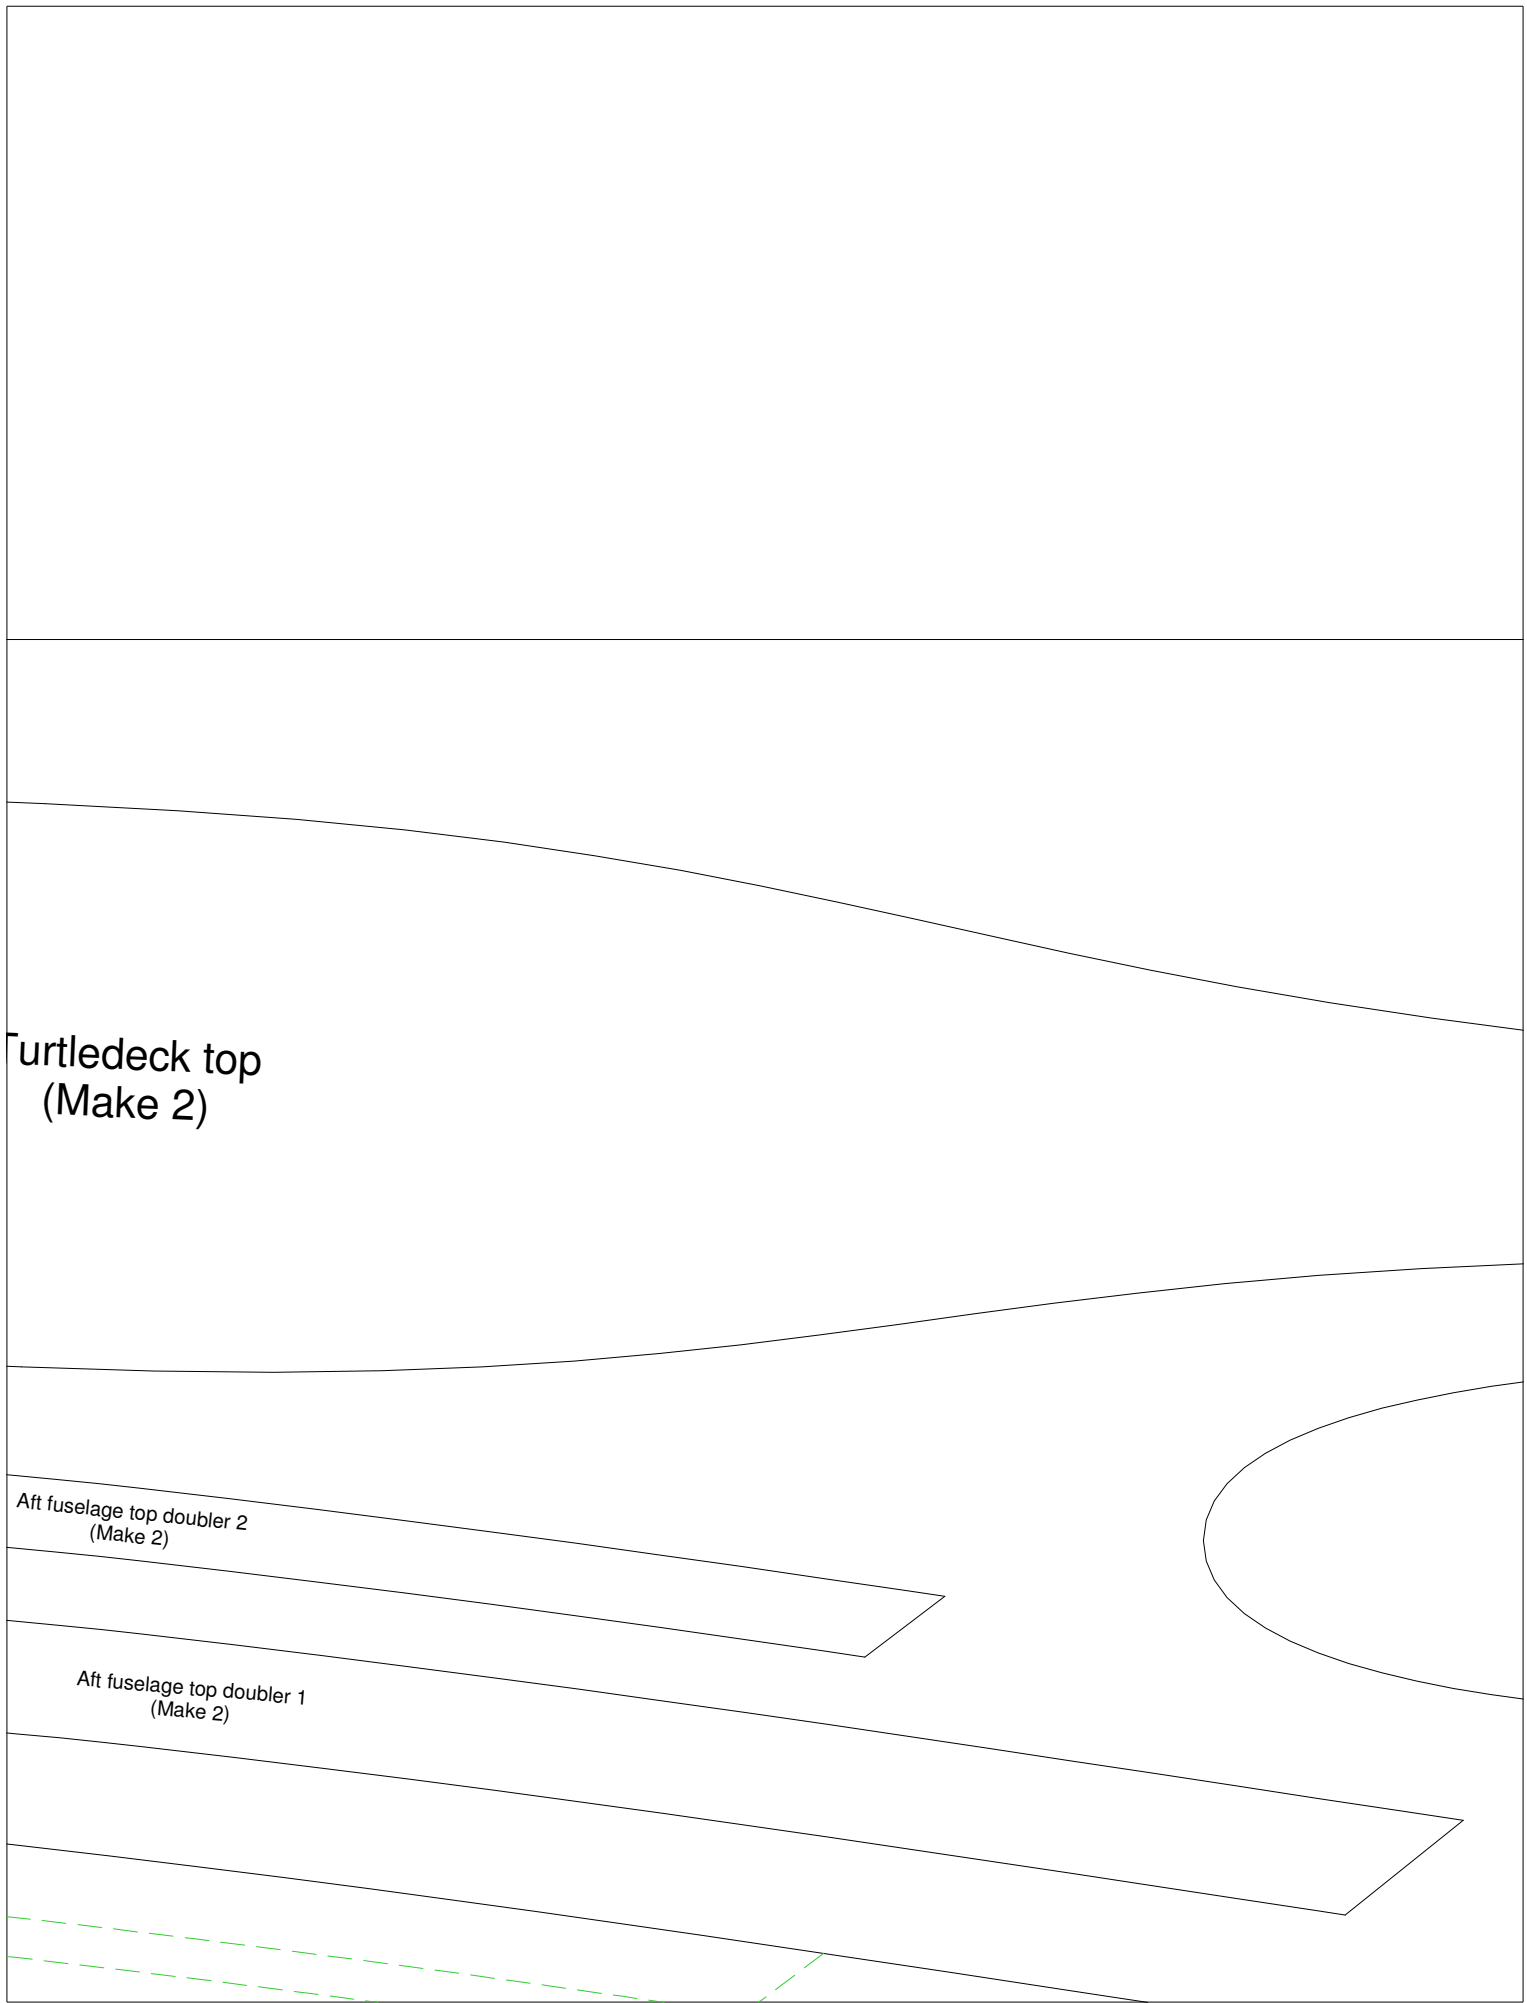

Fwd fuselage top  
(Make 1)

Nosecone top template  
to aid shaping

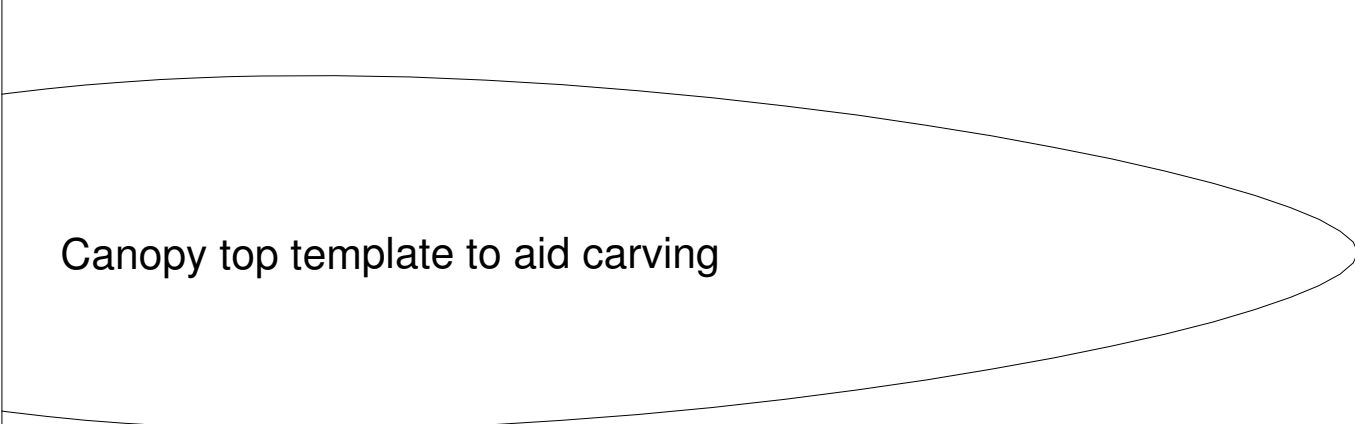

Turtledeck top  
(Make 2)

Aft fuselage top doubler 2  
(Make 2)

Aft fuselage top doubler 1  
(Make 2)

Canopy top template to aid carving

Wingtip missile rail (make 2 from 1/4" x 3/8" balsa)
